May Meeting   *Scott Randell*

For our May presentation our Tech Guru, Bradley Dichter gave another installment of his Mac 101 series. This one is focused on getting the most out of *Safari*. Unlike previous segments of Mac 101, Brad divulged that he did not have time to prepare, so he was doing this off the cuff, or ad lib if you will.

He started with the basics of the interface; the Address Bar, Toolbar and Bookmarks Bar. He showed entering a URL, and the many choices that come up from previous entries. Brad then went on to show how to customize the Toolbar to include useful one-click shortcuts. You do this by using the View menu, and selecting Customize Toolbar (*see Toolbar Shot-1*). This will bring up a sheet containing many one-click shortcuts which you can drag to the Toolbar. (*See Toolbar Shot-2.*)

June Meeting   *Rick Matteson*

It's June and that means it's time for LIMac's "Annual Dave Marra Experience." Dave's presentation will focus on the thinner, lighter, and faster iPad 2. With its all new design, the iPad 2 boasts a dual core A5 chip and graphic performance up to nine times faster; it has two cameras for FaceTime and HD video (rear only) and an amazing 10 hour batttery life.

iPad 2's operating system, *iOS4*, supports built in Apps like *Photo Booth, Mail, Safari, iBooks, Videos, Photos, Find My iPad, iPod, iTunes,* the *App Store, Maps, YouTube, Game Center, Notes, Calendar,* and *Contacts.* (Whew!) There are paid Apps for iPad made by Apple too, including *GarageBand, iMovie, Pages, Keynote* and *Numbers.* Third-party Apps also abound!

Dave will cover all this and more. Dave will also briefly discuss the all new Apple TV. "Rent from the largest selection of HD movies — many available the same day they come out on DVD. Watch Netflix titles instantly. Rent TV shows, commercial free in HD. And stream photos and music from your computer to your widescreen TV."

Before we let Dave entertain and amaze you we will have our usual Q&A sessions and announcements. Then, after Dave's presentation, while you are digesting the plethora of information and Dave is catching his breath, we'll hold our raffle, this month featuring an Apple TV.

This is a meeting you won't want to miss, so be sure to mark your calendar! I'll be there and so should you!

JUNE 10 MEETING

Bradley's Tech Session

Bradley Dichter
Technical Advisor
bdichter@optonline.net

▶ **I have a whole bunch of Smart Mailboxes in** *Mail*. **Is there anyway to sort them alphabetically?**

■ Just drag them into alphabetical order manually. There is no sorting option. It shouldn't take too long. You can group them by creating a Smart Mailbox Folder and then hide some. You can even drag the Smart Mailboxes group above the regular Mailboxes if you like, but no sorting. You can suggest this feature to Apple for the Mail client in Mac OS 10.7. *http://www.apple.com/feedback/macosx.html*

▶ **I can sort the** *notes* **alphabetically on my Mac in** *Mail*, **but is there a way to sort them on the iPad?**

■ No, but maybe someone will come up with a app that replaces Notes that offers this function. There is the free *Easy Note + To Do* which offers the ability to sort notes alphabetically and organize with folders. Do a search for Note in *iTunes'* App Store and you'll see quite a few choices to check out.

▶ **On my iPad how can I add the US Holidays rather than adding them one at a time manually?**

■ You do that in *iCal* on the Mac or in Safari on the iPad. Go to this URL: *http://www.apple.com/downloads/macosx/calendars/usholidaycalendar.html* and click the Download button which will subscribe your iCal to webcal://ical.mac.com/ical/

US32Holidays.ics and your will get a new subscription to US Holidays. Assuming you've set *iTunes'* sync settings under the Info tab to sync iCal Calendars and All calendars or at least include the new choice US Holidays. Check out the other available calendars at *http://www.apple.com/downloads/macosx/calendars/index_abc.html* like the Christian Holiday Calendar at *http://www.apple.com/downloads/macosx/calendars/christianholidaycalendar.html* and the Jewish one at *http://www.apple.com/downloads/macosx/calendars/jewishholidaycalendar.html*. You should refresh the subscriptions once a year on the Mac.

▶ **I have a iMac 2000 series, I upgraded the hard drive from 500GB to 1 TB and now I've bought a MacBook Pro 500GB. What should I use to migrate some of the files from one to the other?**

■ Well for starters, the iMac from 2000 was a 15˝ CRT iMac and iMac DV which were G3 models with a 30GB hard drive tops. The Intel based iMac (21.5 or 27" screen) from Late 2009 or later is more likely. They came with a FireWire 800 port and so does the MacBook Pro. Get a FireWire 800 cable with the squarish 9 pin connector at both ends to connect the two Mac. Boot the MacBook Pro holding down the **T** key, which puts it into FireWire Target Disk Mode and connect the cable. It's internal hard drive will show up on the Desktop of the iMac. You can then drag files from the iMac onto the desired folders on the MacBook Pro. When finished, power off the MacBook Pro and disconnect the cable. Then you
President's Message

Bill Medlow
President
archbill@optonline.net

We are always talking about the future... what's next. Well, once again the future is here, it has been here for a while and it is in the clouds. We always talk about backing up your data but what happens to those whose office or home gets hit by an earthquake, a flood, a fire or some other disaster? Backing up your data off-site or to multiple off-site locations has been the answer. For those with limited resources a limited off-site back up is possible utilizing a MobileMe, Mozy.com or Carbonite.com account. Actually, storage off-site has been around for a while, but utilizing applications that are not on your computer is something else.

Cloud computing offers the promise of accessible, secure access to your data and possibly your applications via the Internet. Using storage on your MobileMe account or Dropbox, Flickr, Google Docs are the same thing. There are three basic types of clouds and they are Public, Private and Hybrid. Each provides advantages and disadvantages but with each, security is of great concern.

Can you imagine accessing applications that are not on your computer? We are talking about on-demand applications, over the Internet that would be linked to a server or computer network, utilizing a web browser powered by a basic operating system. Sounds like an iPhone or iPad? These have a very small applications on your unit and you have to download any updates. With the cloud all upgrades are made automatically, in the cloud. We should start thinking bigger applications and the bigger picture from anywhere at any time.

Is this 1984 all over again? Please direct any feedback to http://limac.board-directory.com/

DAN DANGLO

"..and then I got the stupid idea to sign up with Facebook."

can turn the MacBook Pro back on and finish whatever needs doing with the copied data.

▶ **I have a iMac running *Time Machine* and it's telling me the 500GB backup drive is full and will start deleting older files. This happened a couple of days ago. I don't want it to do that, I want to start a new Time Machine backup. I want to go with a new drive of 2 or 3TB, can I partition the drive and have *Time Machine* backup to one part and use the other for storage, or is that not wise?**

■ You can do that. If you look at the *Time Machine* System Preferences, after you select the new volume for the backup destination, you also have the Options... button where you can exlude what drives not to backup from. By default it will backup from this storage volume as well as your boot drive and not try to backup the destination volume. So it should be fine. You could use finer control and exclude specific folders to not backup. Of course having original data and it's backup on the same physical hard drive is riskier in case of drive failure. I'd suggest a OWC Mercury Elite-AL Pro, which is currently $230 or $310 for a quad interface drive of 2 or 3TB respectively. These are desktop drives, not the portable type, as those would be limited in capacity.

▶ **Two or three months ago, Macworld had a article about how to put your music on an external hard drive. I did exactly what they said and it worked. Only thing is one folder on one drive is 60-something gigabytes and the other was 30-something gigs. The migration they outlined didn't work**

and I had to go through each folder and copy the files. I found about 2000 in one and more like 16 thousand in the other.

■ Don't pay too close attention to the number of gigabytes on the two drives, because the allocation block size will be different and thus the same file will be allocated a different amount, which adds up, still half the size is suspect. You should examine side-by-side the item count in each folder by getting info on them to see where the copy failed before copying all the items. You can drill down from the top iTunes Music folder through each artist's folder to find where the item count differs. When they agree move on, when they don't, it's possible the last file (alphabetically) that did copy is incomplete and truncated. Throw it away and recopy it and the remainder of that folder.

▶ **With the iPad, if I delete mail from Optimum Online am I also deleting from my Mac?**

■ No. They are independent. If you had a gmail or AOL account, which is IMAP, mail deleted from any machine would reflect on any other machine, but with POP mail that Optimum Online offers, if you set the iPad to receive the mail and leave it on the server, then mail would be deleted from the server so it would never have gotten to the desktop Mac. If the iPad removed the mail off the server after receiving it and you deleted some mail, then the server info is not changed in the first place, the mail is deleted off the iPad, the only copy that existed, and still your desktop Mac would not know. In that case any incoming mail would be split between the desktop Mac and the iPad, depending

on the timing of either one checking for new messages. They are in effect fighting for your incoming mail.

▶ **How can I get on the web at the NYIT wireless network?**

■ I'd create a new location for it in the Network system preference panel, but, basically the obvious thing is first, the wireless network is called NYIT Wireless, but you need to use, under Advanced, and Proxies tab, check the option for Auto Proxy Discovery, or check the option for Web Proxy (HTTP), named proxy and port 80 and the proxy server requires password. Specify username: conference.wifi and password apple192. These same two items will be needed in Safari (or Firefox) when you launch them. A web page asking you to log in with the username and password will appear before your home page loads. Remember to change your location back when you get home, where there is no proxy server.

▶ **I opened up a gmail account but everytime a get a email it shows up in my Verizon e-mail account as well. Why?**

■ Because you configured the gmail account wrong. Log in to the *mail.google.com* web site,

click the little gear at the top-right corner, select Mail Settings, click on Accounts, and you should see the verizon account mentioned there under Get mail from other accounts. Remove it and send yourself a test message and it should be OK.

▶ **Every time I send out Verizon yahoo e-mail, it asks me for my password. Why?**

■ Because your login keychain that stores your password is a little messed up. It happens often. You need to go to your Utilities folder, open Keychain Access, filter your list of entries by typing verizon in the search field at the top-right, find the Internet password entry. If there is more than one, delete them all. Go to the Keychain Access menu, select Keychain First Aid, type in your Mac user account password, switch from Verify to Repair and click Start. It should fix any other problems. Then quit Keychain Access and go back to your e-mail program, when it asks for the password one last time (until the next time) make sure you check the box for remember this in my keychain and you should be good to go.

 **TV Review
2nd Generation 2010**
by ReviewGuy1000
from youtube®

The next topic was bookmarks, both the Bookmarks Bar and Bookmarks Menu. First Brad showed the basics of adding a bookmark using the Bookmarks drop down menu, or the keyboard shortcut (command+D). This will give you a dialog box (see dialog box Shot-1) that allows you to save your bookmark to any location you wish, such as Bookmarks Menu, Bookmarks Bar, or a folder you have created. (See dialog box Shot-2)
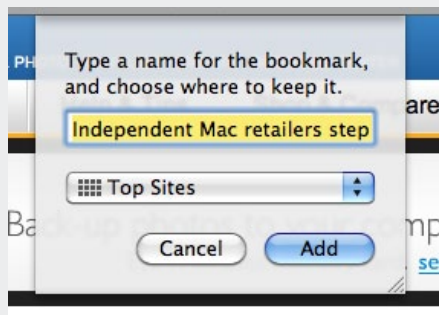

dialog box Shot-1
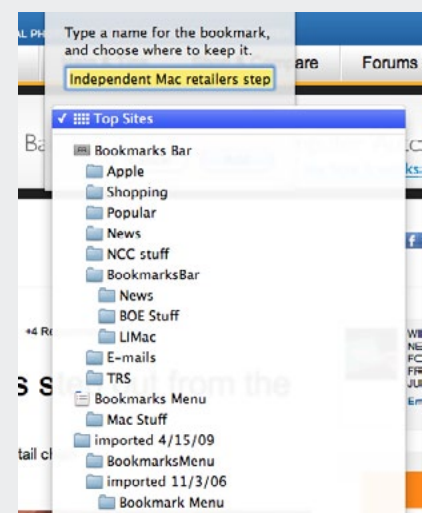

dialog box Shot-2

Brad went on to show how to create folders for categories, and use them to organize your bookmarks, and also make your Bookmarks Bar smaller, so all of it will be visible in the window. He then showed how to search Bookmarks and History. You can search visually using Cover Flow, or type search criteria in the upper right search box. All of this becomes visible by clicking the Bookmarks symbol in the Toolbar. (*See Toolbar Shot-3*)

Toolbar Shot-3

Next Brad talked about security. We have all heard about cookies, and in the early days they were thought as something to watch out for. Well some you do, but most are actually helpful. With most cookies the information remains on your computer, so you really don't have much to worry about. You want to keep the ones from sites you go to often (like *apple.com*) so that you don't have to repeatedly enter your information. The ones you don't recognize you can safely remove, and even if you make an error and delete one you wanted to keep, you only have to enter your information the next time you visit the sight. One very important action Bradley suggested everyone perform is to check the box labeled "Warn when visiting a fraudulent website," (*Safari->Preferences->Security*). *See Preferences Shot-1.*

LIMac's June Raffle Prize

LIMac's June raffle table will feature the amazing AppleTV as the grand prize. With AppleTV there is no more waiting for DVDs or watching stale blockbusters on cable. You get instant access to the hottest Hollywood titles and new releases — often the same day they come out on DVD. You can choose from the largest online selection of movies to rent (over 7,000 movies with 3,400 available in HD), including first run movies for just $4.99, and the largest online selection of HD TV show episodes to rent from ABC, ABC Family, Fox, Disney Channel and BBC America for just 99 cents. AppleTV also gives access to the Netflix streaming catalog for Netflix subscribers, and the ability to browse and search, rate content, add to or remove from your queue, or instantly stream straight to your HD TV. With

AppleTV you can also enjoy millions of YouTube videos, more than 200,000 podcasts, 4,000 Internet radio stations and personal photos from MobileMe and Flickr with several gorgeous new slideshow themes. Music, videos and photos can also be streamed from PCs and Macs, turning your HD TV into the hub of your home entertainment system.

AppleTV has built-in HDMI, Wi-Fi, Ethernet and an internal power supply for easy set-up, and features silent, cool, very low power operation in an enclosure that's less than four inches square. AppleTV set-up is quick and easy with a single HDMI cable connection. Just connect Apple TV to your HD TV, join a Wi-Fi network and with a few clicks on the seven-button aluminum Apple Remote, you have access to amazing content. You can also control AppleTV with an iPhone, iPad or iPod touch using the *Remote* app, available as a free download on the App Store.

So come on down to the June meeting, enjoy another amazing presentation from Dave Marra and if Lady Luck is on your side you may go home with a new piece of Apple hardware to add to your collection. ➤

Beware Fake MACDefender Antivirus Software
by Adam C. Engst

While the news of the Weyland-Yutani crimekit (see "Macs Targeted by New "Crimekit"," 2 May 2011) is more concerning for the Mac platform as a whole, security software firm Intego has identified a new piece of malware that masquerades as an antivirus program called MACDefender. (This MACDefender isn't in any way associated with a German company called MacDefender that runs the MacDefender.org Web site and writes geocaching and other GPS-related software.)

A rather specific combination of actions needs to occur for MACDefender to be downloaded and installed, including visiting a poisoned Web site, allowing the Web browser to open files after the file downloads itself, and then entering an admin password in the installer. But if all that happens, MACDefender adds itself to the login items, displays a menu bar icon, and looks like a real anti-virus program. See the Intego security memo for screenshots of what it looks like.

MACDefender's goal appears to be to scam users into paying for the program, and to that end, it claims to find viruses and also opens porn sites in the user's browser every few minutes in an attempt to make the user think they're infected. After paying, the warnings disappear. Of course, it's entirely likely that the purchase process is designed as much to steal credit card numbers as to make money from purchases, given that the charges can be reversed if the user discovers the scam.

MACDefender is an example of "scareware," an increasingly popular type of malware that attempts to trick users into thinking they are infected with viruses in order to extort money (and credit card numbers).

Intego's VirusBarrier X5 and X6 with updated malware definitions do protect against MACDefender, but MACDefender isn't sufficiently subtle for us to recommend that you run antivirus software (see "Should Mac Users Run Antivirus Software?," 18 March 2008). Just avoid iffy Web sites, and for goodness sake, if you're ever asked for your administrator password by a software installer that you didn't explicitly download and run, don't enter that password!

It's also a good idea to uncheck Safari's "Open 'safe' files after downloading" checkbox in its General preferences. I believe Google Chrome and Firefox always ask for permission when you first encounter a new type of download, and you can clear previously granted auto-opening permissions in Chrome's Under the Hood preferences (choose Chrome > Preferences > Under the Hood > Downloads) and in Firefox's Applications preferences (set the desired file type, such as Zip, to Always Ask).
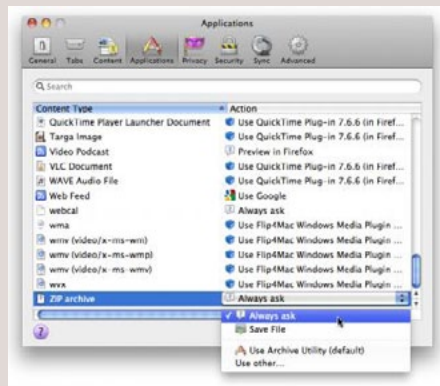

General meeting time schedule:
Meetings are held at
The **New York Institute of Technology**,
Building 300 (Anna Rubin Hall),
Old Westbury, Long Island.
For more detailed information about this location go to
limac.org

Meetings start promptly at **7:00** P.M.
Bradley's Q&A: **7:00 – 7:30** P.M.
